TWO BRANDS, ONE COMPANY

Kurs og Sikkerhet — machinery, trucks, cranes,
maritime**TryggKurs** — HMS, electrical, fall protection, fire
safety

CONVERSION VALUE (90D)

NOK 6.7M

~NOK 27M annualized via Google Ads

24.8% of spend (NOK 388,301) produced zero bookings. That's the equivalent of 86 lost course bookings. Conversion tracking is contaminated — real cost per booking is likely 42–71% higher than reported. Every optimization decision is based on flawed data.

What's Working — Protect These

● Brand Campaigns

Combined: NOK 37,361 spend → 404+ bookings
NOK 92 avg cost per booking — world-class efficiency
 TryggPortalen brand: **99x return on ad spend**

● Arbeidsvarsling Online

Best non-brand performer across both accounts
 NOK 86–260 cost per booking range
 Online format **clearly resonates** — scale this

● Dynamic Search Ads (Long-Tail)

KoS Dynamic Search Ads Norway: 128 bookings at NOK 1,016 each
 Catches fragmented demand across dozens of course types
Best active campaign by volume — budget-limited

● Ad Quality (KoS)

154 of 207 ads (74%) rated **"Good"** strength
 Only 11 ads (5%) rated "Poor" — fixable in a day
 Above industry average for ad quality

These elements generate real value. The plan protects and builds on them while eliminating waste everywhere else. **Your strongest asset is organic positioning — paid search should amplify it, not replace it.**

Here's What Your Customers See

We looked at your websites, your competitors, and your Google Ads. This is the reality today.

YOUR PRIMARY SITE	YOUR MAIN COMPETITOR
	
 No prices visible anywhere — users must click through 3+ pages to find cost	 Prices clearly visible on course pages — reduces friction to booking
 Cookie consent wall covers 100% of mobile screen on arrival	 Enterprise client logos (Equinor, Hydro) build instant trust
 Checkout says "We recommend using a PC" — 59% of traffic is mobile	 Full mobile booking experience — no desktop-only barriers

 **This is why we're starting with the website, not the ads.** You're spending NOK 6.3M per quarter driving traffic to pages that actively push customers away. The ads are doing their job — the landing experience isn't. Everything in this audit builds from this core insight.

Your Google Ads in Numbers

⚡ **Quick win potential: NOK 51–64K/month** — that's 11–14 extra course bookings recovered from waste, not new spend. The next pages show exactly where and how.

Two Accounts, Different Problems

Kurs og Sikkerhet

kursogsikkerhet.no — Machinery, trucks, cranes, maritime

90-day spend **NOK 672,720**

Conversions **707**

Cost per Booking **NOK 951**

Return per NOK Spent **4.62x**

Campaign type **100% Search**

Active campaigns **25 of 159**

TryggKurs

tryggkurs.no — HMS, electrical, fall protection, fire safety

90-day spend **NOK 892,303**

Conversions **775**

Cost per Booking **NOK 1,152**

Return per NOK Spent **4.00x**

Campaign type **43% PMax* / 57% Search**

Active campaigns **33 of 105**

*PMax (Performance Max) = Google's automated campaign type that shows ads across Search, Display, YouTube, and Gmail. Google controls targeting and placement.

PMax vs Search on TryggKurs: PMax costs NOK 1,389 per booking vs Search at NOK 1,020 — **36% more expensive**. PMax click rate is 0.81% vs Search at 10.7%. Most PMax spend is Display/YouTube, not Search.

264 total campaigns, only 58 active. 7 different bidding strategies across two accounts. No unified approach. Manual cost-per-click campaigns show NOK 2,283 per booking — worst in account.

3-SECOND VERDICT

Your ads bring people in. Your website lets them out.

Strong search demand (18,400/mo) + good ad quality (74% "Good") + broken landing pages (0.03% mobile booking rate) = significant untapped potential. Fix the funnel, not the ads.

Your Data Is **Lying** to You

Every bidding decision, budget allocation, and performance report is based on contaminated conversion data.

● Purchase (KoS)

413 real purchases recorded. But GA4 Call Click fires simultaneously as Primary — phone taps counted as equal to real bookings. Reported cost per booking NOK 951. Real cost per booking: **~NOK 1,629** (+71%)

GA4 Call Click (KoS)

296 phone link taps counted as Primary conversions. These are NOT purchases — they are phone number clicks. **Must be demoted to Secondary immediately.**

Enrollment Form (TK)

244 conversions flagged "Action Required." May be double-counting with Purchase (689 conv). If so, true cost per booking rises from NOK 1,152 to **~NOK 1,655** (+44%)

Purchase (TK)

689 conversions via Purchase action. Appears clean as primary conversion. TryggKurs tracking is healthier but still needs Enrollment Form verification.

What your data says:

1,482 bookings at NOK 1,056 each and 4.26x return. "Things are going well."

What's actually happening:

Inflated booking counts, unknown real cost per booking, Google's automated bidding optimizing for phone clicks instead of purchases. Every metric is suspect.

Where the Funnel Breaks

Every Google Ads click follows 6 steps from search to booking. Here's where Smooth Gruppen loses customers.

Steps 1-3: Strong

Your organic rankings and ad quality generate real demand. 18,400 monthly searches, strong click rates — the top of funnel works.

Steps 4-5: Broken

Cookie consent blocks content. 543 landing pages with no prices, no CTAs, no trust signals. Users land confused.

Step 6: Critical

WooCommerce checkout tells mobile users to "use a PC." Mobile = 59% of traffic but only 0.03% booking rate on TryggKurs.

This is why your ads "don't work" — they do work. The ads bring people in. The website lets them out. Fix the landing pages and checkout, and the same ad spend produces 20–35% more bookings. No extra budget required.

Where Money Disappears

NOK 388K

in 90 days

= 86 course bookings

Waste by Category (90 days)

All categories sum to ~NOK 388K (24.8% of combined spend, both accounts, 90 days)

TryggKurs mobile: 0.03% booking rate. NOK 258K mobile spend → 156 bookings. PMax is serving banner ads to users who never book.

TryggKurs tablet: 0.01% booking rate. NOK 12K spend, 94K "clicks" (accidental banner taps), 5 bookings. NOK 2,465 per booking.

The Market Is Wide Open

Key insight: Trainor is NOT your direct competitor. They dominate electrical safety (FSE/Ex). Your core — machinery, trucks, cranes, rigging — has no dominant paid player.

Paid Search Opportunity

Monthly searches (core)	18,420
Annual click value (paid)	~8.8M NOK
Paid ads visible in SERPs	Almost none
Average CPC range	NOK 15–90
Your branded search vol.	1,110/mo

First-mover advantage in paid search is available NOW. Norwegian CPCs are NOK 15–90 vs UK/US equivalent at NOK 200–800. You can dominate before competitors react.

Your Organic Positions (Already Strong)

KEYWORD	VOL/MO	POSITION	PAID GAP
truckførerkurs	2,900	#3	No ads visible
maskinførerkurs	590	#4	No ads visible
FSE kurs	1,600	#4	Trainor only
fallsikringskurs	720	#7 + #8	No ads visible
G11 kurs	590	#4 + #5	No ads visible
riggerkurs	590	#5 + #6	No ads visible
varme arbeider kurs	720	#9 + #10	Minimal
ADR kurs	590	Not ranking	590/mo gap

Both brands often hold 2 spots in the top 10 for the same keyword — a powerful organic moat. Data: DataForSEO SERP API, March 2026.

Visual Competitor Analysis

Side-by-side: What Trainor.no does differently — and where you have the advantage.

KURS OG SIKKERHET

TRAINOR (COMPETITOR)

DIMENSION	SMOOTH GRUPPEN	TRAINOR	KOMPETANSEBEDRIFTEN
Price Visibility	HIDDEN	VISIBLE	PARTIAL
Trust Signals	BASIC	ENTERPRISE LOGOS	REVIEWS
Mobile Booking	"USE PC"	FULL MOBILE	BASIC
Course Breadth	130+ COURSES	ELECTRICAL FOCUS	MACHINERY ONLY
Digital Platform	TRYGGPORTALEN	FULL SAAS	NONE
Paid Search Presence	ACTIVE (FRAGMENTED)	FSE ONLY	MINIMAL
Brand Clarity	3 BRANDS	1 BRAND	1 BRAND
Geographic Reach	NATIONWIDE NO	5 CITIES + 22 COUNTRIES	REGIONAL

✓

You already beat Trainor where it matters most: course breadth and machinery expertise. But they win on trust signals, pricing transparency, and mobile experience. Those are fixable — your course catalog is not something they can replicate overnight.

Cannibalization & Budget Leaks

Cross-Brand Cannibalization

Both accounts bid on identical course terms: truckførerkurs, arbeidsvarsling, fallsikringskurs, FSE kurs, and more. Google's auction treats them as separate advertisers **competing against each other**.

Duplicate course categories	10+
Estimated CPC inflation	10–20%
Quarterly waste from self-bidding	NOK 100K+

Fix: Assign primary ownership per brand. KoS = truck, maskin, kran, rigger, maritime. TK = FSE, fall protection, HMS, varme arbeider, lift, brannvern.

PMax Is Stealing from Search

TryggKurs PMax campaigns match to core course terms but serve Display/YouTube ads instead of Search ads. Same keyword, worse conversion rate.

PMAX CANNIBALIZING SEARCH TERMS (TK)

"verneombudskurs" via PMax	NOK 2,513, 0 conv
"arbeidsvarsling" via PMax	NOK 1,822, 0 conv
"kursportalen" via PMax	NOK 2,734, 0 conv
"varme arbeider" via PMax	NOK 1,757, 0 conv

4.37x

Search Return

3.50x

PMAX Return

4 budget-limited campaigns are being starved while waste runs uncapped. KoS DSA Norway (best performer, NOK 1,016 per booking) is budget-capped at NOK 2,300/day. Meanwhile, D5L maritime (NOK 6,231 per booking) runs freely. Reallocate before adding new budget.

Your Customers Don't Know Who You Are

Three different brand names. Two Google Ads accounts. One confused customer.

BRAND 1: KURS OG SIKKERHET

BRAND 2: TRYGGKURS

1 Kurs og Sikkerhet

Primary website, WooCommerce booking. Google Ads Account #1. Focuses on truck, crane, machine courses. 154 campaigns.

2 TryggKurs

Second brand website, separate Google Ads Account #2. Same courses, same company, different name. 99 campaigns.

3 Presto Training

Third brand appearing in checkout flow. Users start on KoS, get redirected to Presto. Trust collapses at the final step.

The cost of confusion: Both accounts bid on identical keywords (10+ categories). CPCs inflate 10–20% from self-competition. Estimated waste: **NOK 100K+/quarter** in inflated CPCs alone.

The fix: Assign brand ownership per course category. KoS = practical (truck, crane, machine). TryggKurs = safety/compliance (FSE, fall protection, HMS). Zero overlap, zero self-bidding.

Desktop Experience: What Visitors See

The maskinførerkurs category page — where NOK 121,771 in ad spend lands. Annotated with 6 conversion killers.

- 1 Cookie consent wall** — covers the full viewport on first visit. Zero content visible until dismissed. Mobile users often bounce here.
- 2 No trust signals** — no logos, no reviews, no "98% completion rate" visible above the fold. First impression is bare.
- 3 No prices shown** — users must click into individual dates to discover cost. Friction kills intent. Competitors show prices upfront.
- 4 No booking CTA** — no "Book Now" buttons. Just date links. Users don't know what clicking does.
- 5 543 landing pages** — DSA sends users to individual date instances. Each course × each date = separate URL. Impossible to optimize.
- 6 Desktop-only checkout** — WooCommerce page literally says "Vi anbefaler å bruke PC" (We recommend using a PC). 59% of traffic is mobile.

Mobile Experience: 59% of Your Traffic

TryggKurs mobile conversion rate: **0.03%** — that's 3 bookings per 10,000 visitors. Here's what they see.

Mobile Problems

- 1 Cookie wall fills 100% of screen** — on mobile, the consent popup covers everything. Users can't even see what course they clicked on.
- 2 Date list with no prices** — scrolling through dates with no indication of cost. Each tap is a leap of faith.
- 3 "Vi anbefaler å bruke PC"** — the checkout literally tells mobile users to switch to desktop. 59% of traffic dismissed.
- 4 PMax Display waste** — TryggKurs serves banner ads on mobile (4.5M impressions) that drive accidental taps. 0.03% booking rate.

BOOKING RATE

Before & After: What We'd Build

A dedicated PPC landing page for truckførerkurs — your highest-volume keyword (2,900 searches/month).

What Changes

- ✓ **Price visible immediately** — "fra kr 4.500" in hero. No clicking to discover cost.
- ✓ **Trust bar with proof** — "98% kurs avholdt", "15+ byer", "50+ kurstyper"
- ✓ **Date cards with booking CTAs** — city, date, price, "BOOK" button per slot
- ✓ **Mobile-first design** — sticky CTA footer, no "use a PC" messages
- ✓ **Single URL per course** — /truckforerkurs instead of 50+ date-instance URLs
- ✓ **FAQ section** — captures long-tail intent (T1 vs T2, what to bring, certificate info)

Expected Impact

Cost per booking reduction **20–35%**

Mobile booking rate lift **3–5x**

Quality Score boost **+2–3 pts**

Full mockup included — see the interactive truckførerkurs HTML file in your audit package. Ready for your web team.

5 Quick Wins This Week

1

Fix conversion tracking

LOW EFFORT

FOUNDATION

Remove GA4 Call Click from Primary on KoS. Verify Enrollment Form dedup on TK. Until this is done, all other optimizations are guesswork.

2

Reduce mobile PMax + exclude tablets

LOW EFFORT

NOK 29-39K/MO

Apply -30% mobile bid on TK PMax. Exclude tablets entirely. Mobile has 0.03% booking rate, tablet has 0.01% booking rate.

3

Pause D5L maritime campaign

LOW EFFORT

NOK 14.5K/MO

NOK 6,231 per booking — 0.37% booking rate. Mostly recreational traffic matching commercial courses. Immediate pause saves money today.

4

Switch "Click" campaigns to Max Conversions

LOW EFFORT

NOK 5-8K/MO

Maximize Clicks bidding burns budget without conversion focus. Maskinførerkurs Click: NOK 2,253 per booking vs automated campaigns at NOK ~1,000.

5

Add competitor negatives across all campaigns

LOW EFFORT

NOK 2.3K/MO

Block trainor, relyon, nutec, falck, presto, brannvernforeningen — NOK 6.9K combined waste over 90 days.

Combined quick win potential: NOK 51-64K/month (NOK 610-770K annualized) from items 2-5. That's 11-14 additional course bookings per month — recovered, not new spend. Item 1 (fix tracking) has no direct savings but is the foundation that makes all other optimizations reliable. All 5 actions are low effort, implementable within one week.

Three Growth Levers

Executed in sequence — each phase builds on the last

THIS WEEK → MONTH 1

Waste Elimination
NOK 55–90K/mo
saved

- Fix conversion tracking
- Add 100+ negative keywords
- Reduce PMax mobile spend
- Block cross-brand terms
- Pause losing campaigns
- Switch to conversion bidding

MONTHS 2–6

Demand Capture
+NOK 3–7M/yr value

- Unlock budget-limited campaigns
- Launch missing course categories
- Build dedicated PPC landing pages
- Add prices to all course listings
- Fix cookie consent on mobile
- Resolve brand cannibalization

MONTHS 6–12

Demand Creation
+NOK 5–15M/yr value

- Corporate outreach campaigns
- YouTube & content marketing
- Market TryggPortalen platform
- Expand: ADR, welding, offshore
- Consolidate 264 → ~40 campaigns
- Enterprise competence management

PHASE 1 IMPACT (12MO)

NOK 660K–
1.1M

Recovered from waste elimination alone

PHASE 1+2 IMPACT (12MO)

+NOK 3–7M

Additional ad-driven revenue captured

ALL 3 PHASES (18–24MO)

+NOK 8–
15M

Total incremental value from Google Ads

The Bottom Line

"You generate NOK 6.7M in conversion value every 90 days through Google Ads. But 25% of spend is wasted on terms that produce zero bookings, conversion tracking counts phone clicks as purchases, and Performance Max is 36% more expensive than Search. By fixing these fundamentals, we recover NOK 51–64K/month in savings — that's 11–14 additional course bookings every month from the same budget. The market has 18,400 monthly searches with almost no paid competition. The opportunity is significant. We just need to stop the bleeding first."

THIS WEEK

- ☐ Fix tracking
- ☐ Add negatives
- ☐ Pause D5L
- ☐ Block cross-brand

THIS MONTH

- ☐ Cap PMax budgets
- ☐ Switch bidding
- ☐ Mobile bid adj.
- ☐ Expand Dynamic Search Ads budget

THIS QUARTER

- ☐ PPC landing pages
- ☐ Add pricing to sites
- ☐ Assign brand ownership
- ☐ Consolidate campaigns

Suggested Next Step

30-minute walkthrough call — we'll screen-share this audit, answer your questions, and agree on a Week 1 action plan.

No commitment. If after the call you'd rather implement this internally, the audit is yours to keep.
